

CS 412 Intro. to Data Mining

Chapter 1. Introduction

Jiawei Han, Computer Science, Univ. Illinois at Urbana-Champaign, 2017

CS 412. Course Page & Class Schedule

- Textbook
 - Jiawei Han, Micheline Kamber and Jian Pei, *Data Mining: Concepts and Techniques* (3rd ed), Morgan Kaufmann, 2011
- Class Homepage:
<https://wiki.engr.illinois.edu/display/cs412>
- Bookmark on course schedule page
- **Class Schedule: 9:30-10:45 am Tues./Thurs. @1404 SC**
- Office hours: 10:45-11:30am Tues./Thurs. @2132 SC
- Lecture media: recorded; but class attendance is critical

Jiawei Han

CS 412. Course Work and Grading

- Assignments, Programming Assignments, and Exams
 - Written Assignments: 15% (three homework assignments expected)
 - Programming assignments: 20% (two programming assignments expected)
 - Midterm exam: 30%
 - Final exam: 35%

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Pattern លក្ខណៈពាណិជ្ជកម្ម

Why Data Mining?

- The Explosive Growth of Data: from terabytes to petabytes *ଲାଭିତ ଦାଟା ମୋଡେଲ ଉପରେ କିମ୍ବା*
- Data collection and data availability
 - Automated data collection tools, database systems, Web, computerized society
- Major sources of abundant data *ବ୍ୟାକରଣ ପ୍ଲାଟ ଗ୍ରାଫ୍ ଏବଂ ଦାଟା ବିନାନ୍ତୁ କ୍ଷମତାବିଦୀତ ପରିପାଳନ କରିବାକୁ ପାଇବାକୁ*
- Business: Web, e-commerce, transactions, stocks, ...
- Science: Remote sensing, bioinformatics, scientific simulation, ...
- Society and everyone: news, digital cameras, YouTube
- We are drowning in data, but starving for knowledge!
- “Necessity is the mother of invention”—Data mining—Automated analysis of massive data sets

What Is Data Mining?

- ❑ Data mining (knowledge discovery from data)
- ❑ Extraction of interesting (non-trivial, implicit, previously unknown and potentially useful) patterns or knowledge from huge amount of data
- ❑ Data mining: a misnomer? *ମାତ୍ର ଡାଟା ମିନିଙ୍ ନାହିଁ କିମ୍ବା କିମ୍ବା କିମ୍ବା*
- ❑ Alternative names
- ❑ Knowledge discovery (mining) in databases (KDD), knowledge extraction, data/pattern analysis, data archeology, data dredging, information harvesting, business intelligence, etc.
- ❑ Watch out: Is everything “data mining”?
- ❑ Simple search and query processing
- ❑ (Deductive) expert systems

នៅក្នុងជាមុន data នេះ

Knowledge Discovery (KDD) Process

- This is a view from typical database systems and data warehousing communities
- Data mining plays an essential role in the knowledge discovery process

ទាញយកពិនិត្យរបស់ពីភាពការណ៍នៃការស្ថិតិយោគ

Indexing នៃនាមព័ត៌មាន text ដែលត្រូវបានស្ថិតិយោគ

Data Integration

Snap shot នៃការស្ថិតិយោគ

Data Warehouse

Task-relevant Data

Data Mining

Pattern Evaluation

Knowledge

Selection

Example: A Web Mining Framework

- Web mining usually involves
 - Data cleaning
 - Data integration from multiple sources
 - Warehousing the data
 - Data cube construction
 - Data selection for data mining
 - Data mining
 - Presentation of the mining results
 - Patterns and knowledge to be used or stored into knowledge-base

Data Mining in Business Intelligence

KDD Process: A View from ML and Statistics

- This is a view from typical machine learning and statistics communities

Data Mining vs. Data Exploration

- Which view do you prefer?
 - KDD vs. ML/Stat. vs. Business Intelligence
 - Depending on the data, applications, and your focus

- Data Mining vs. Data Exploration
 - Business intelligence view
 - Warehouse, data cube, reporting but not much mining
 - Business objects vs. data mining tools
 - Supply chain example: mining vs. OLAP vs. presentation tools
 - Data presentation vs. data exploration

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Multi-Dimensional View of Data Mining

Data to be mined

ទីផ្សារទិន្នន័យសារពីរបាយការណ៍

- Database data (extended-relational, object-oriented, heterogeneous), data warehouse, transactional data, stream, spatiotemporal, time-series, sequence, text and web, multi-media, graphs & social and information networks

Knowledge to be mined (or: Data mining functions)

stream data → data និងជាបន្ទាន់

- Characterization, discrimination, association, classification, clustering, trend/deviation, outlier analysis, ...

output នៃ data mining តាមតម្លៃខ្លួន

- Descriptive vs. predictive data mining → A និង B នាង់
- Multiple/integrated functions and mining at multiple levels

Techniques utilized

ឧបករណ៍ទិន្នន័យ

- Data-intensive, data warehouse (OLAP), machine learning, statistics, pattern recognition, visualization, high-performance, etc.

Applications adapted

អំពីទិន្នន័យទាំងអស់

- Retail, telecommunication, banking, fraud analysis, bio-data mining, stock market analysis, text mining, Web mining, etc.

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined? 
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Data Mining: On What Kinds of Data?

- Database-oriented data sets and applications
 - Relational database, data warehouse, transactional database
 - Object-relational databases, Heterogeneous databases and legacy databases
- Advanced data sets and advanced applications
 - Data streams and sensor data
 - Time-series data, temporal data, sequence data (incl. bio-sequences)
 - Structure data, graphs, social networks and information networks
 - Spatial data and spatiotemporal data
 - Multimedia database
 - Text databases
 - The World-Wide Web

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Data Mining Functions: (1) Generalization

- ❑ Information integration and data warehouse construction
 - ❑ Data cleaning, transformation, integration, and multidimensional data model
- ❑ Data cube technology
 - ❑ Scalable methods for computing (i.e., materializing) multidimensional aggregates
 - ❑ OLAP (online analytical processing)
- ❑ Multidimensional concept description: Characterization and discrimination
 - ❑ Generalize, summarize, and contrast data characteristics, e.g., dry vs. wet region

Data Mining Functions: (2) Pattern Discovery

- Frequent patterns (or frequent itemsets)
□ What items are frequently purchased together in your Walmart?
- Association and Correlation Analysis

ការសរុបឲ្យក្នាល់ទំនាក់ទំនង Supermarket នៅ

on Pattern ក៏ដែលពេតចិត្ត មិនតាមរយៈគោលការណ៍

- A typical association rule
 - Diaper → Beer [0.5%, 75%] (support, confidence)
 - Are strongly associated items also strongly correlated?
- How to mine such patterns and rules efficiently in large datasets?
- How to use such patterns for classification, clustering, and other applications?

Data Mining Functions: (3) Classification

Classification model ພົມລົງລາຍງານ

6

Classification and label prediction ຂໍ້ອາຍຮັມວິເວລະ ຮ່າງກອດຕາມ

- Construct models (functions) based on some training examples
- Describe and distinguish classes or concepts for future prediction
- Ex. 1. Classify countries based on (climate)
- Ex. 2. Classify cars based on (gas mileage)
- Predict some unknown class labels

Typical methods

- Decision trees, naïve Bayesian classification, support vector machines, neural networks, rule-based classification, pattern-based classification, logistic regression, ...

Typical applications:

- Credit card fraud detection, direct marketing, classifying stars, diseases, web-pages, ...

Data Mining Functions: (4) Cluster Analysis

- ❑ Unsupervised learning (i.e., Class label is unknown)
- ❑ Group data to form new categories (i.e., clusters), e.g., cluster houses to find distribution patterns
- ❑ Principle: Maximizing intra-class similarity & minimizing interclass similarity
- ❑ Many methods and applications

សំណងទាញក្នុងទីតាំង

សារព័ត៌មានរបស់អ្នកជួលឲ្យក្នុងទីតាំង

Data Mining Functions: (5) Outlier Analysis

- Outlier analysis
 - Outlier: A data object that does not comply with the general behavior of the data
 - Noise or exception?—One person's garbage could be another person's treasure
 - Methods: by product of clustering or regression analysis, ...
 - Useful in fraud detection, rare events analysis

Data Mining Functions: (6) Time and Ordering: Sequential Pattern, Trend and Evolution Analysis

- Sequence, trend and evolution analysis
 - Trend, time-series, and deviation analysis
 - e.g., regression and value prediction
 - Sequential pattern mining
 - e.g., buy digital camera, then buy large memory cards
 - Periodicity analysis
 - Motifs and biological sequence analysis
 - Approximate and consecutive motifs
 - Similarity-based analysis
- Mining data streams
 - Ordered, time-varying, potentially infinite, data streams

Data Mining Functions: (7) Structure and Network Analysis

- ❑ Graph mining
 - ❑ Finding frequent subgraphs (e.g., chemical compounds), trees (XML), substructures (web fragments)
- ❑ Information network analysis
 - ❑ Social networks: actors (objects, nodes) and relationships (edges)
 - ❑ e.g., author networks in CS, terrorist networks
 - ❑ Multiple heterogeneous networks
 - ❑ A person could be multiple information networks: friends, family, classmates, ...
 - ❑ Links carry a lot of semantic information: Link mining
- ❑ Web mining
 - ❑ Web is a big information network: from PageRank to Google
 - ❑ Analysis of Web information networks
 - ❑ Web community discovery, opinion mining, usage mining, ...

Evaluation of Knowledge

- Are all mined knowledge interesting?
 - One can mine tremendous amount of “patterns”
 - Some may fit only certain dimension space (time, location, ...)
 - Some may not be representative, may be transient, ...
- Evaluation of mined knowledge → directly mine only interesting knowledge?
 - Descriptive vs. predictive
 - Coverage
 - Typicality vs. novelty
 - Accuracy
 - Timeliness
 - ...

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Data Mining: Confluence of Multiple Disciplines

Why Confluence of Multiple Disciplines?

- Tremendous amount of data
 - Algorithms must be scalable to handle big data
- High-dimensionality of data
 - Micro-array may have tens of thousands of dimensions
- High complexity of data
 - Data streams and sensor data
 - Time-series data, temporal data, sequence data
 - Structure data, graphs, social and information networks
 - Spatial, spatiotemporal, multimedia, text and Web data
 - Software programs, scientific simulations
- New and sophisticated applications

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?

- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted? 
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Applications of Data Mining

- Web page analysis: classification, clustering, ranking
- Collaborative analysis & recommender systems
- Basket data analysis to targeted marketing
- Biological and medical data analysis
- Data mining and software engineering
- Data mining and text analysis
- Data mining and social and information network analysis
- Built-in (invisible data mining) functions in Google, MS, Yahoo!, Linked, Facebook, ...
- Major dedicated data mining systems/tools
- SAS, MS SQL-Server Analysis Manager, Oracle Data Mining Tools)

Chapter 1. Introduction

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

Major Issues in Data Mining (1)

- Mining Methodology
 - Mining various and new kinds of knowledge
 - Mining knowledge in multi-dimensional space
 - Data mining: An interdisciplinary effort
 - Boosting the power of discovery in a networked environment
 - Handling noise, uncertainty, and incompleteness of data
 - Pattern evaluation and pattern- or constraint-guided mining
- User Interaction
 - Interactive mining
 - Incorporation of background knowledge
 - Presentation and visualization of data mining results

Major Issues in Data Mining (2)

- Efficiency and Scalability
 - Efficiency and scalability of data mining algorithms
 - Parallel, distributed, stream, and incremental mining methods
- Diversity of data types
 - Handling complex types of data
 - Mining dynamic, networked, and global data repositories
- Data mining and society
 - Social impacts of data mining
 - Privacy-preserving data mining
 - Invisible data mining

- Summary

Summary

- Data mining: Discovering interesting patterns and knowledge from massive amount of data
- A natural evolution of science and information technology, in great demand, with wide applications
- A KDD process includes data cleaning, data integration, data selection, transformation, data mining, pattern evaluation, and knowledge presentation
- Mining can be performed in a variety of data
- Data mining functionalities: characterization, discrimination, association, classification, clustering, trend and outlier analysis, etc.
- Data mining technologies and applications
- Major issues in data mining
